## Quality control

### How we control our product quality ?

1. Appraise and select suppliers in strict accordance with ISO9001 standards .
2. The key raw materials shall be inspected in strict accordance with the corresponding inspection standards .
3. All workers must be trained and qualified to be employed .
4. Regularly carry out training in production technology, product knowledge, and industry consultation .
5. Special procedures must be posted with corresponding work instructions to indicate the process parameters and operational requirements .
6. Each order must have a first test, a mid-production test, a post-production test, and a random test .
7. All goods must be aged for more than 12 hours to ensure that the defect rate is less than 3/1000 .
8. Each order must completely pass the Quality Department QA inspection before it can be put into storage .
9. All testing equipments used must comply with the process documentation and be regularly proofread .
10. All sample test data must be recorded and kept by the Quality Department for inspection at any time .

**Driver test**

**PCB test**

**Thermal paste**

**PCB cleaning**

**Inline inspection**

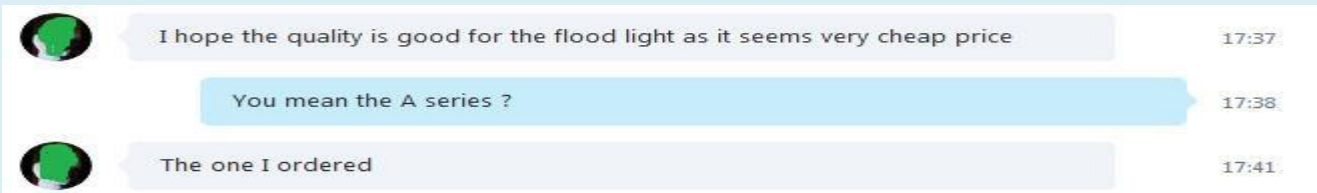

**Ageing test**
